

Senior R&D Scientist
Location: York, UK

We are a fast growing, innovative York-based company focused on developing point of care diagnostic products across a range of sectors including clinical, veterinary, agricultural and environmental markets. We are GMP compliant and accredited with ISO 13485:2016 and ISO 9001:2015 quality standards.

We are looking for an experienced R&D Scientist to support our growing pipeline of lateral flow diagnostic project. This role is within the Product Development team and involves taking projects from the point of feasibility through scale up and the transfer into manufacturing.

You will report to the Product Development Manager and be responsible for pro-actively leading products through this stage of the development process, working with colleagues across R&D, manufacturing, quality & regulatory to ensure projects achieve design review milestones on time and on budget. Lateral flow or ELISA development experience is essential. You will be required to be familiar with and keep up to date with established and emerging technologies in the medical devices/diagnostic industry in, particular relating to Point of Care testing, to ensure our service provision is maintained at the highest standard possible.

Primary Duties and responsibilities:

- Development of lateral flow assays for third parties and internal product development.
- Senior scientist within the Product Development team, taking projects from feasibility to transfer to manufacturing.
- Maintaining a design/development programme and regular interaction with the customer and other stakeholders.
- Prepare written SOPs for laboratory methods, procedures and instrumentation.
- Working with colleagues across R&D, manufacturing, quality & regulatory to ensure projects achieve design review milestones on time and on budget. Comply with all aspects of the Abingdon Health Quality Management System in the completion of tasks, and participate in internal audits when required.

Essential Skills/Competence

- Degree or higher in a scientific subject or equivalent professional experience.
- At least 4 years' experience of developing Lateral Flow or ELISA assays.
- Flexible approach to working in a relatively new but rapidly expanding organisation.
- The ability to communicate effectively with a wide range of internal and external personnel.
- Hands-On approach, a team player.
