

## **Lateral Flow Assay Development Scientists**

**Location: York, UK**

**Initial Fixed Term: 3 – 12 months**

Abingdon Health is mobilising its rapid test development and manufacturing operations in order to scale-up the deployment of rapid diagnostics in response to the global COVID-19 outbreak.

Due to significant demand for our lateral flow development and manufacturing services we are recruiting for experienced scientists with immunoassay and preferably lateral flow development experience to join our York (UK) team immediately.

This team role involves taking projects from the point of feasibility through scale up and the transfer into manufacturing. You will be required to maintain high standards during the development process and work with colleagues across research and development (R&D), manufacturing, quality & regulatory to ensure projects are delivered on time and on budget.

### **Reporting**

Assay Development Manager

### **Location**

York, United Kingdom

### **Type**

3 – 12 months contract with potential for role to be made permanent.

For all enquiries concerning career opportunities please email [recruit@abingdonhealth.com](mailto:recruit@abingdonhealth.com) with Curriculum Vitae (CV).

### **About Abingdon Health**

Abingdon Health is a UK-based developer and manufacturer of lateral flow tests and smartphone reader solutions. Abingdon Health offers development and manufacturing services for customers looking to develop new assays or looking to transfer existing laboratory-based assays to a lateral flow format. Abingdon takes projects from initial concept through to routine and large-scale manufacturing.

Abingdon Health is headquartered in York, England.
